Abstract

[illegible]

1. **Identify the problem.** The first step in the problem-solving process is to identify the problem. This involves recognizing the issue, understanding its scope, and determining the impact it has on the organization.

Figure 1 is a heatmap titled 'Spatial distribution of the 100 most abundant taxa'. The x-axis is labeled 'Sample' and ranges from 1 to 100. The y-axis is labeled 'Taxa' and ranges from 1 to 100. The heatmap shows a complex pattern of colors representing the relative abundance of different taxa across the samples. The colors range from dark red (high abundance) to dark blue (low abundance). The pattern shows a mix of high and low abundance taxa across the samples, with some taxa showing more consistent abundance than others.
