

[illegible]

Sequence logo for the 100bp region around the start of the 5' UTR. The y-axis represents information content in bits, ranging from 0 to 1.5. The x-axis shows positions from -100 to 100. The sequence is color-coded by nucleotide: A (blue), C (green), G (red), and T (yellow). Key features include a strong T-rich region around position 0 (TGA) and a G-rich region around position 10 (GGG).

Figure 1. The effect of the number of trials on the number of correct responses. The number of correct responses was significantly higher than the number of incorrect responses in all cases. The number of correct responses was significantly higher than the number of incorrect responses in all cases. The number of correct responses was significantly higher than the number of incorrect responses in all cases.

Figure 1. The effect of the number of trials on the mean number of correct responses (left) and the mean number of correct responses per second (right) for the 100 trials condition. The error bars represent the standard error of the mean.

Figure 1. The effect of the number of trials on the mean number of correct responses for the 100 trials condition. The number of correct responses was significantly higher than the number of incorrect responses for all conditions. Error bars represent the standard error of the mean.
